

The New Jersey Agricultural Experiment Station & Rutgers Cooperative Extension proudly present the Rain Garden Certification Program

The Rain Garden Certification Program consists of two options for certification: Rain Garden Specialist (RGS) and Rain Garden Specialist and Trainer (RGST).

In the RGS option, the trainees will learn from the experts of Rutgers Cooperative Extension about the technical side of rain garden design, as well as being engaged in a hands-on rain garden installation. For those interested in taking it a step further, the RGST option offers training on rain garden educational programming in addition to the technical side of rain garden design and the hands-on rain garden installation. To achieve certification, the trainees will have to take the RGS or RGST exam and score an 80% or higher. The RGS and RGST trainees will receive their certificates upon completion of the training and passing of the exam.

All are welcome and previous gardening experience is not required. Additional information and registration for the Rain Garden Certification program is available at <http://water.rutgers.edu>

REGION	TRAINING DATES
North Jersey	May 4 and 5
Central Jersey	April 26 and 27
South Jersey	May 10 and 11
